

ARPA-E WORKSHOP

Nuclear Heat and Power for Industrial Process Applications

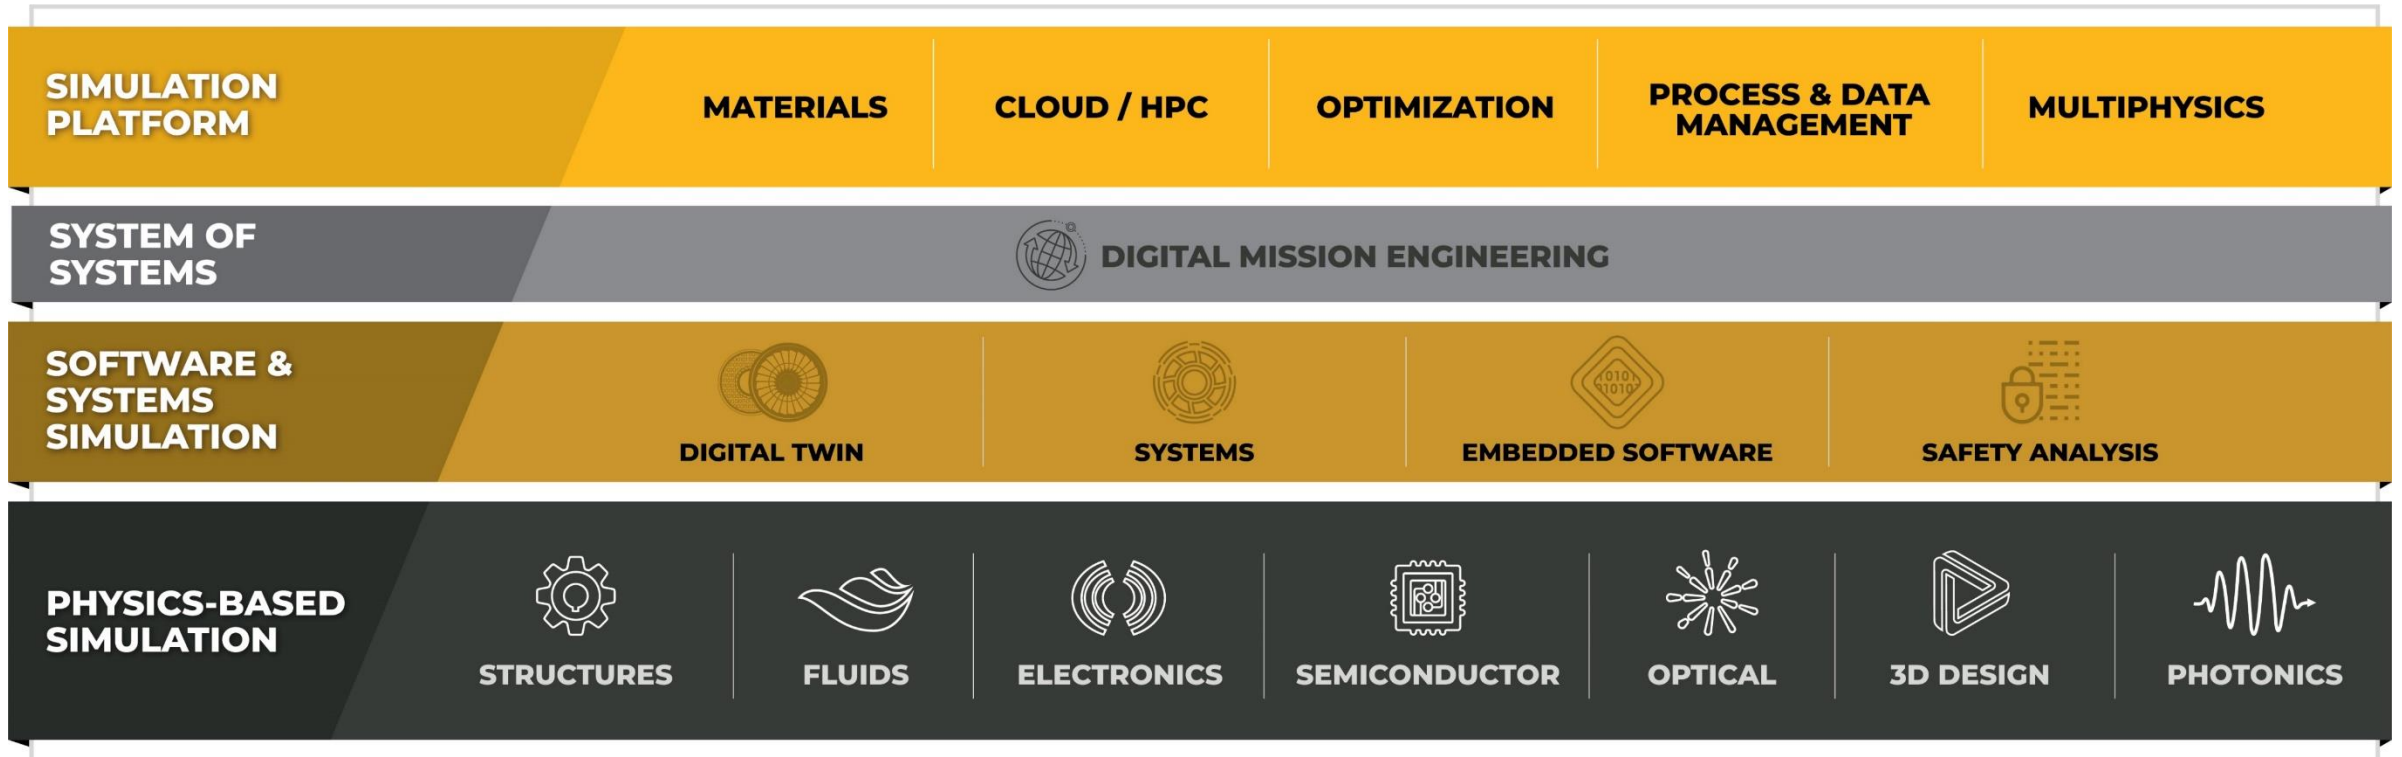

May 31 – June 1, 2023

Anchal Jatale

Manager Application Engineering : Energy | Process

ANSYS Delivers Complete System Optimization

Driving efficiency, optimization, collaboration and consolidation

Simulation is All We Do

- 85 Ansys products
- Development team focused on simulation
- A managed, customer-specific learning program to sustain and accelerate the value of engineering simulation

Open Ecosystem

- Integration with partner & competitor products
- Connect on-premises and in the cloud
- Optimized with artificial intelligence and machine learning

Simulation Solutions for Nuclear Systems

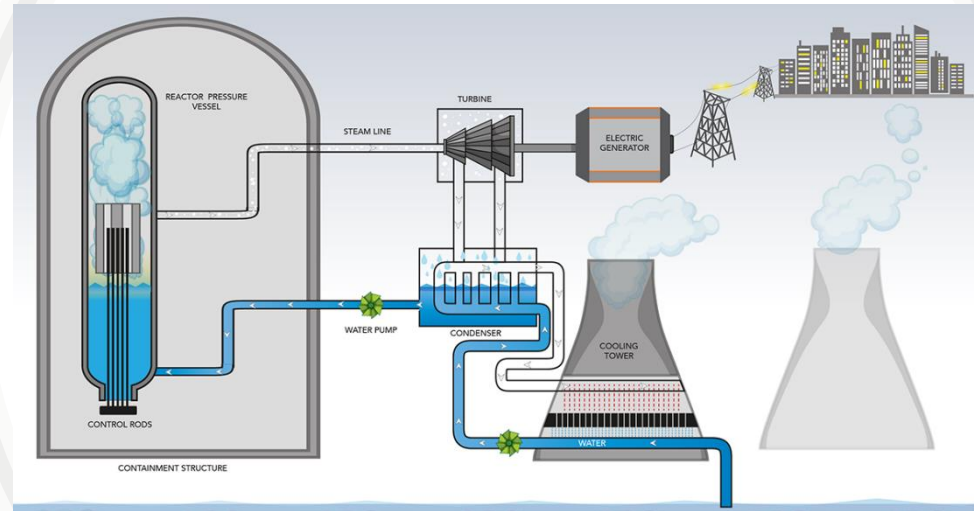

Nuclear Fission Reactor Design (PWR, SMR)

Nuclear Fusion Reactor Design

Fuel Assembly

Waste storage, treatment & transport

Equipment design & tooling

Safety: Building design and modifications

Safety: Extreme events

Safety: I&C systems and software controls

Reactor Digital Twins

Electronic systems design

Use case: Nuclear Heat for Hydrogen Production

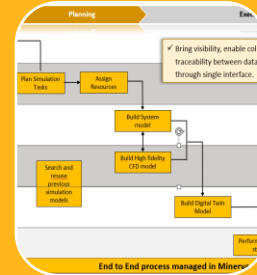

Component Modeling

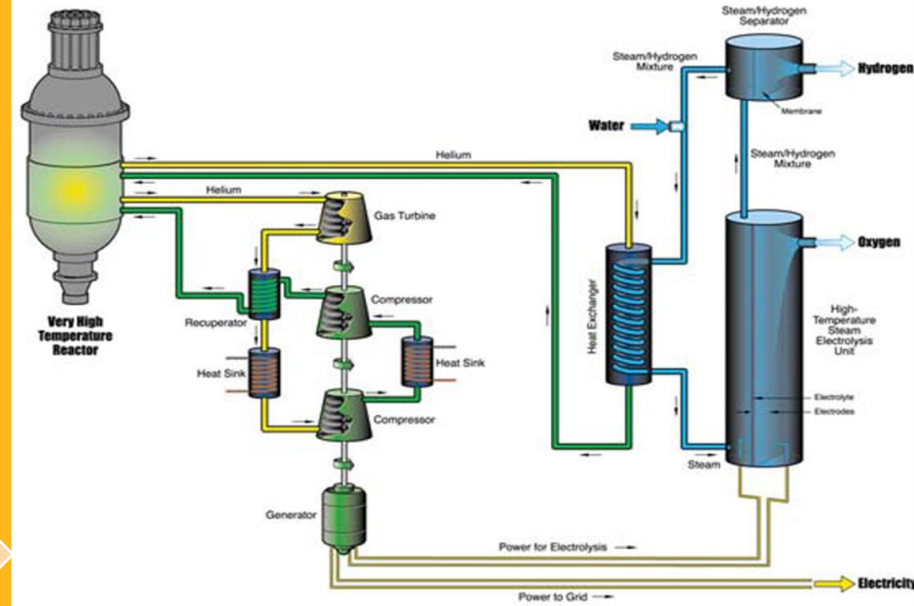

System Modeling

Requirements

Project/Process management

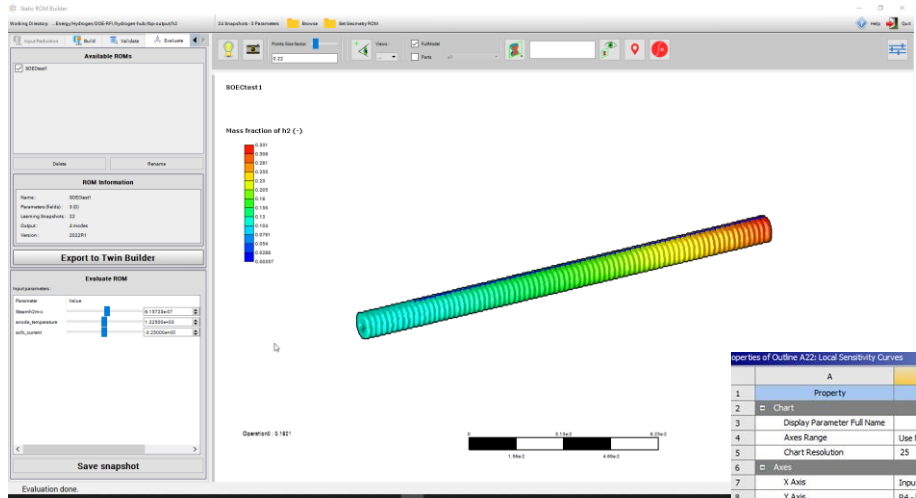

Multifidelity Modeling; Open architecture; Automated; Easy adoption and deployment

High Fidelity models: Electrolysis Unit

Also available:
Electric Potential,
current density,
Nernst Potential,
Activation
potential etc

Reduced Order Modeling (ROM)

3 Input Variables

- Anode Temperature : (850K-1900K)
- Current : (-6 to -0.5 Amp)
- Steam Flow (4e-7 to 8e-7 Kg/s)

Total : 24 training points in DOE

DOE algorithms: Optimal Space Filling Design

Property	Value	Enab.
1		
2		
3		
4		
5		
6		
7		
8		
9		
10	P1 - anode_temperature	1138
11	P2 - soft_current	-4.515
12	P3 - Steam2mix	6E-07
13		
14	P4 - hydrogen-out	0.48251

Response Surface ROM : hydrogen conversion efficiency

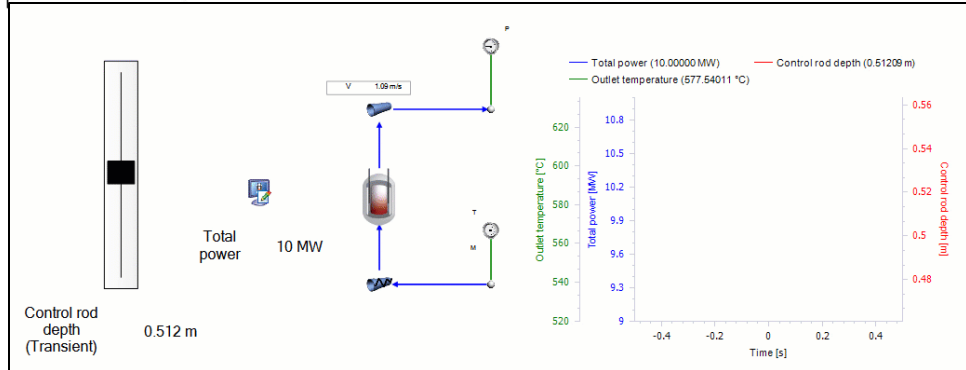

3D ROM : hydrogen Mass fraction in the domain

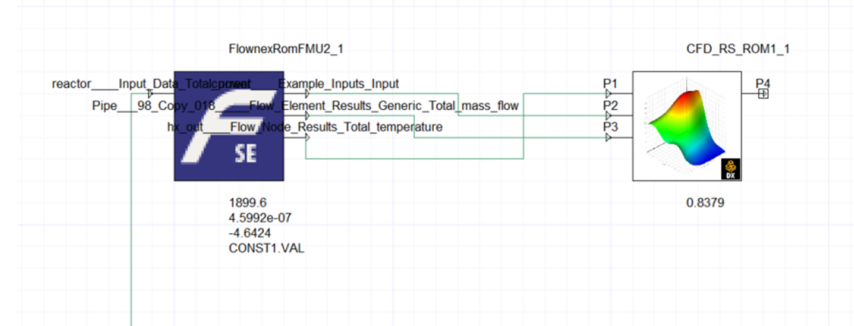

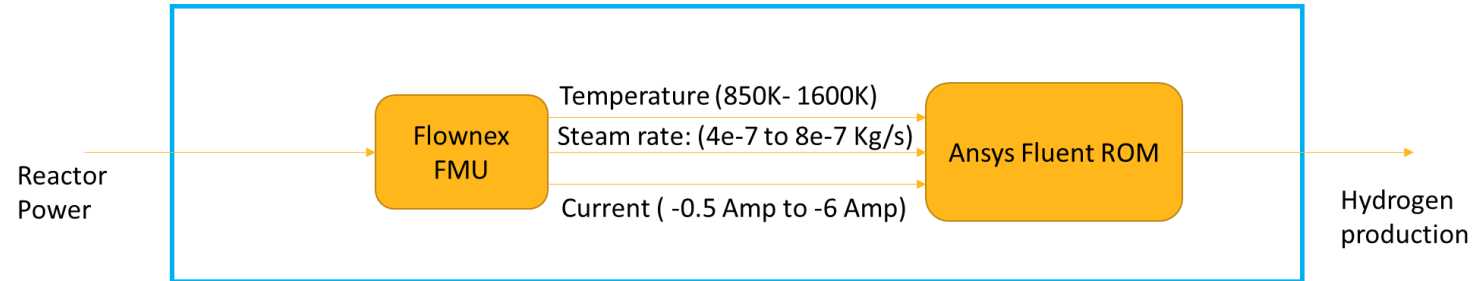

Expedite design and analysis of Nuclear system with Coupling

- Reactor Physics
- Turbines
- Compressors
- Heat Exchangers
- Generator
- Two-Phase H₂O
- Closed Loop

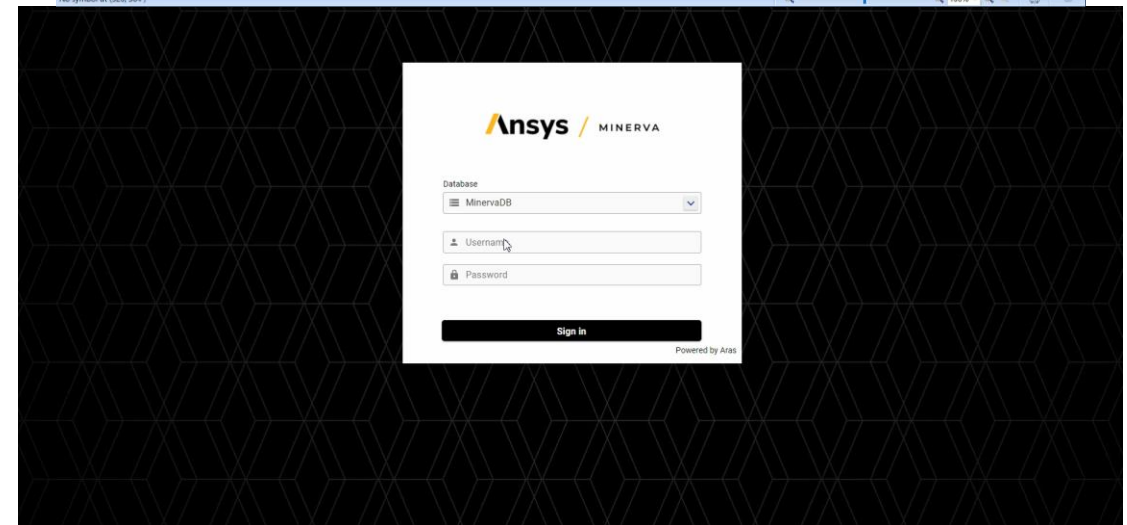

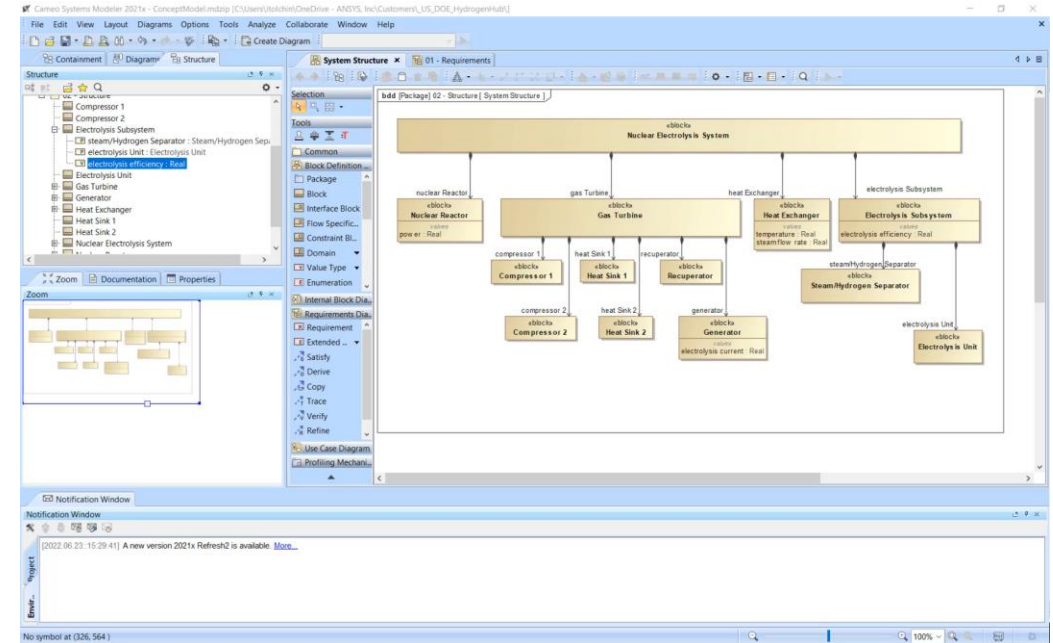

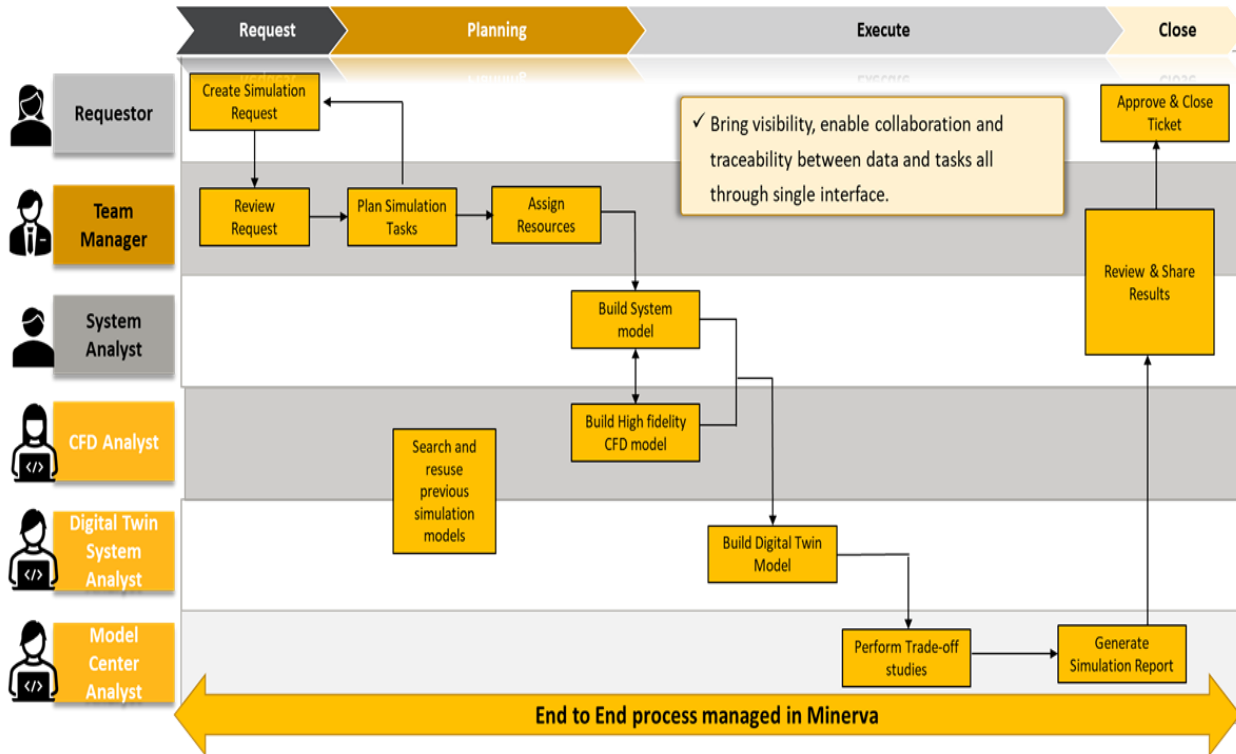

- NQA1 Compliant
- 2D Thermal Transport
- Robust Component Libraries
- 1D CFD
- Complex Fluid Models
- Customize and Connect

1D-3D system coupling

Efficient Simulation Project Management

Connect People and Process

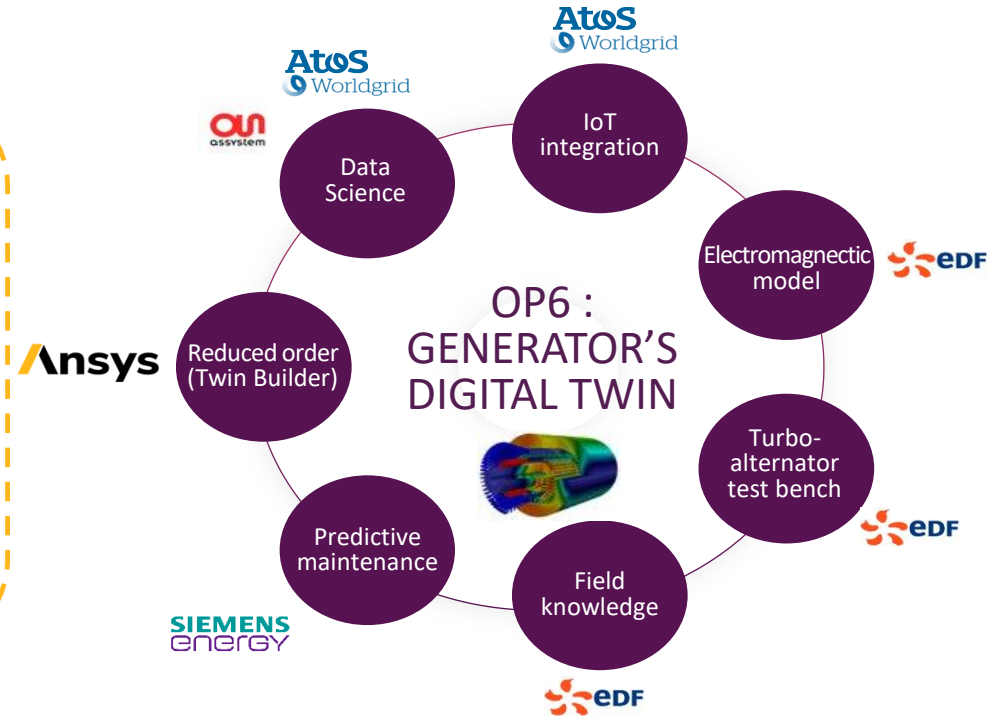

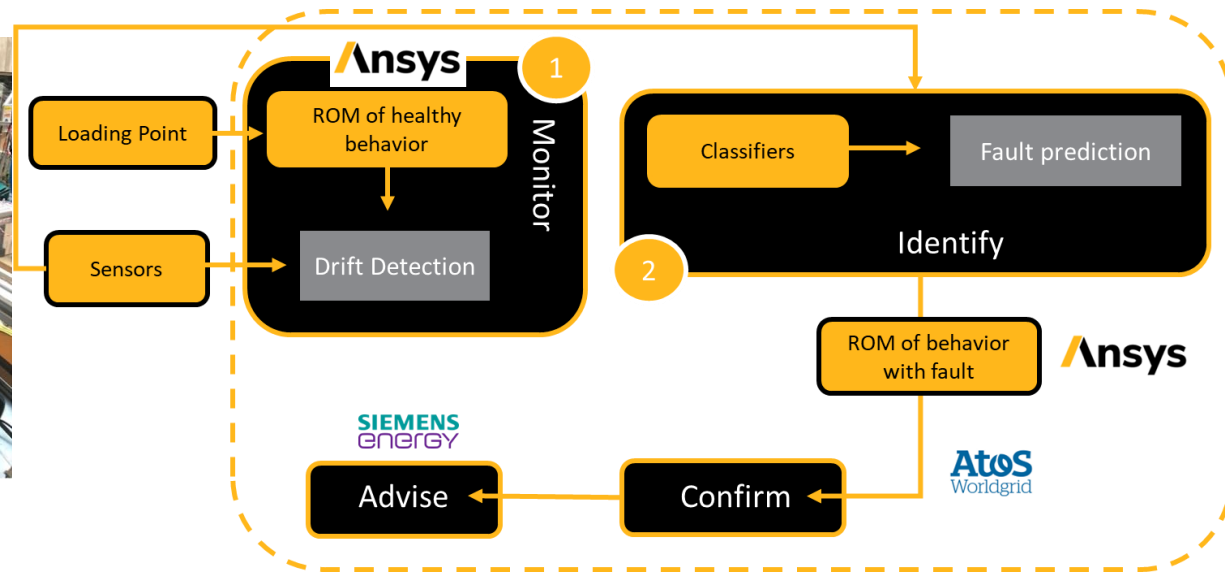

- a) Requirements (MBSE)
- b) Data management

Digital Twins at Saclay Nuclear Research Centre (CEA)

KEY OBJECTIVES

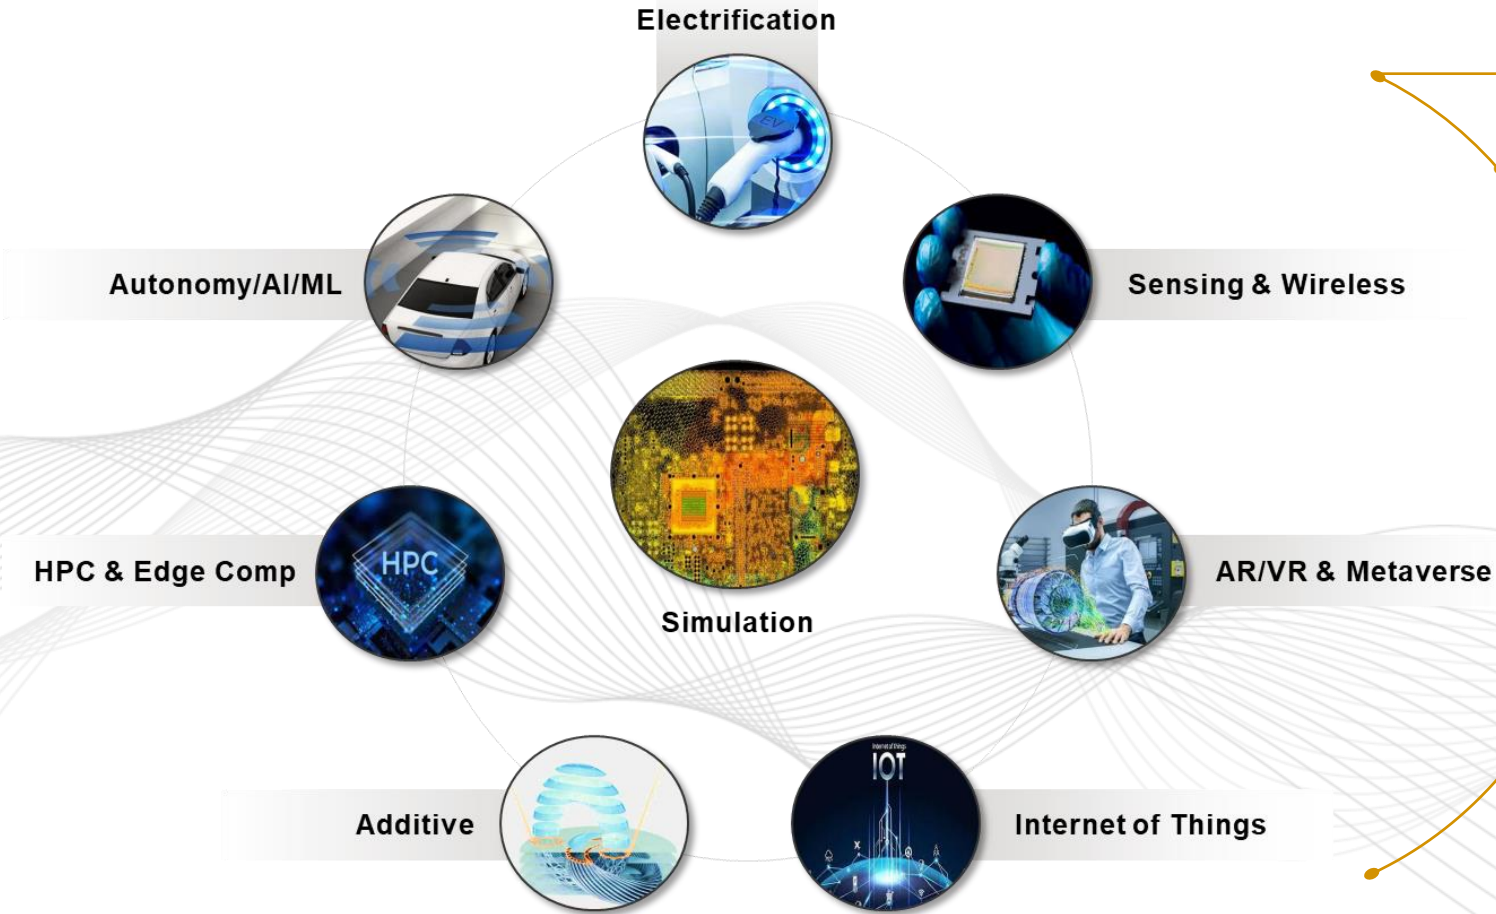

- ✓ Centralize data acquisition and analytics
- ✓ Access to monitoring data and automated insights
- ✓ Provide predictive maintenance capabilities

Digital Twins at CEA: Operation Stage

Digital Technology Convergence | Accelerated Through Simulation

3 Truths | "1 x 1 can be >10"

All of these technologies are, or will help accelerate & deliver the digital transition

These technologies are **anything but linear**, their combined applications can drive order(s) of magnitude change ... **Hyper-Scalers!**

Simulation enables it all to go faster, reducing- risk, improving performance, and delivering more certainty earlier in the development process

Proliferating digital assets, democratizing solution methods, and maturing new technologies ...

The Ansys logo consists of a yellow slanted bar followed by the word "Ansys" in a bold, black, sans-serif font.
