

Breakout Session 2 – Finding optimal processes

Breakout Session 2 - Questions

- ▶ How to balance breadth (lots of parameters being optimized) and depth (sufficiently detailed solutions that actually have meaning)?
- ▶ What is the optimal amount of LMP data to specify in a potential FOA?
- ▶ How will information be passed between the different models?
- ▶ How can we compare monoethanolamine (MEA) to less mature capture technologies, including dynamic model validation?
- ▶ What could a team accomplish with \$1M of Federal funding and 18-24 months?
