

Break-out One Objectives – Frustrations & Pain Points

- Articulate what is working and what is not working in general, in your opinion.
- What would you like to see improved?
- What would you like to see eliminated?
- Focus on materials/technology/process – not regulatory, permitting or policy.
- Articulate degradation modes-in-use.
- What are the most common causes of in-application failure?
- How reliable are current test methods for predicting future failure?
- When the test methods fail, do we understand the reasons why?
