Advanced Research Projects Agency – Infrastructure (ARPA-I)

January 2023

Dr. Chris Atkinson
Deputy Director for Advanced Research, OST-R

Dr. Robert Hampshire
Deputy Assistant Secretary, OST-R
The U.S. Department of Transportation (DOT)

- **Mission:**
  
  *To deliver the world’s leading transportation system, serving the American people and economy through the safe, efficient, sustainable, and equitable movement of people and goods.*

- DOT employs almost 55,000 people across the country, in the Office of the Secretary of Transportation (OST) which includes the Office of the Assistant Secretary for Research and Technology (OST-R), and its operating administrations and bureaus, each with its own management and organizational structure.

- Includes these nine operating (modal) administrations:
  - Federal Aviation Administration (FAA)
  - Federal Highway Administration (FHWA)
  - Federal Motor Carrier Safety Administration (FMCSA)
  - Federal Railroad Administration (FRA)
  - Federal Transit Administration (FTA)
  - Great Lakes St. Lawrence Seaway Development Corp (GLS)
  - Maritime Administration (MARAD)
  - National Highway Traffic Safety Administration (NHTSA)
  - Pipeline and Hazardous Materials Safety Administration (PHMSA)
DOT Strategic Goals
Overview of ARPA-I

- The Infrastructure Investment and Jobs Act (IIJA) of 2021, known as the Bipartisan Infrastructure Law (BIL), authorized the establishment of the Advanced Research Projects Agency - Infrastructure (ARPA-I), a new agency housed within OST-R.

- “Infrastructure” refers to “any transportation method or facility that facilitates the transit of goods or people within the United States.” Includes “roads, highways, bridges, ports, airports, pipelines, marine, rail and aviation” as well as its digital or virtual infrastructure.

- The Director will be appointed by the President and report to the Secretary of Transportation.

- ARPA-I will have a separate budget request and appropriations process that is distinct from the rest of the Department.

- ARPA-I will invest in innovative technology projects that industry is unlikely to undertake due to technical and financial uncertainty.

- ARPA-I will collaborate with technology innovators from the public, private, and academic sectors – including with minority-serving institutions – to develop transformative solutions for infrastructure and transportation systems.
ARPA-I’s mission is to catalyze the development of innovative technologies, systems, and capabilities that transform the nation’s physical and digital infrastructure to ensure American leadership. We aim to build the future of transportation that is safe, secure, efficient and resilient, while achieving net-zero emissions and increasing equity and access to mobility for all.
The Goal of ARPA-I

Develop Innovative Infrastructure Technologies and Solutions for Transportation

- ARPA-I will be to Transportation as DARPA is to Defense, and ARPA-E is to Energy
- Develop innovative solutions to persistent problems in infrastructure and transportation
- Unleash US innovation and creating new infrastructure R&D ecosystems
- Ensure the US has a 21st Century Infrastructure System and will reach the goal of net-zero GHG emissions by 2050
- Develop infrastructure that will create the safest, most efficient, climate friendly and resilient transportation system in the world
The Characteristics of an ARPA

• Focus on innovation-led R&D
• High risk – high reward programs that align with DOT’s goals (note: ‘high risk’ does not mean ‘unsafe’)
• Highly nimble organization – term-limited leadership and program directors, unique funding mechanisms
• Doctrine of substantial involvement – opinionated technical leadership and management
• No fixed roadmap – opportunistic and pragmatic in its technical outlook
• No R&D for the sake of it – understanding that without deployment, there is no success; and that deployment requires commercialization
• An understanding of both the “customer” and the end-user
• No ‘solutions looking for a problem’
• Invigorate an industrial sector, catalyze and energize people, products and processes
Why ARPA-I

ARPA-I will fill a Key Gap* in Transportation and Infrastructure

- The Transportation and Infrastructure sectors are being left behind as other industries transform through *Fourth Industrial Revolution* technologies (AI, Robotics, IoT, Advanced Manufacturing and Materials)
- Transportation and Infrastructure suffer from fragmentation, limited competition, and sluggish commercial markets
- American's global competitiveness and security are at risk due to lagging and vulnerable infrastructure
- Overcoming these dynamics requires a mechanism to dramatically accelerate the research-to-deployment process
- ARPA-I offers the solution that supports advanced research, fosters internal and external partnerships, and facilitates commercialization to enable transformation in these sectors
- ARPA-I will NOT duplicate or replicate existing programs across the DOT Administrations or modes (or elsewhere in the Federal R&D sphere) but will complement and supplement these.

*ARPA-I was authorized in the Bipartisan Infrastructure Law (2021) and has received initial appropriation of $3.2M in FY23.
Topics of Interest for ARPA-I

Advancing DOT priority goals: Transformation, Safety, Climate, and Equity

Materials, Structures, and Construction

- Zero or negative carbon materials for infrastructure, extremely durable and resilient concrete, accelerated construction processes (3D printing of pavement, bridges, tunnels, pipelines, water infrastructure, and high-speed rail beds), accelerated construction of seawalls and shoreline reinforcement

Digital Infrastructure for Mobility

- 6G and edge computing for automated vehicles (AVs), intrinsically assured AI and ML for AVs, virtual LIDAR and ubiquitous machine vision, digital twins, HD mapping of infrastructure and topology (above and below)

Automated Surface, Air, and Maritime Vehicles

- AV development, testing and validation, vehicle connectivity and networking (V2X), freight and logistics automation, fully electrified transportation – in-situ charging, V2G
- AI-enhanced ATC and ATM, assuring safety for autonomous aircraft, infrastructure modifications for AAM integration; autonomous shipping

Cross-cutting and Enabling Technologies

- Advanced PNT – millimetric accuracy (including signals of opportunity), cybersecurity (once and for all) – intrinsically secure networking and data transmission for mobility infrastructure, digital twins of transportation systems and infrastructure, AR and VR for travel replacement
ARPA-I Opportunities

Sample Opportunities:

• Intersection Safety Challenge to reduce fatalities at intersections (over 10,000 fatalities per year in the U.S.) using machine perception, artificial intelligence and machine learning, real-time decision-making, and active warning systems

• Develop new construction methods and materials for infrastructure, including pavement materials that self-heal, absorb carbon, allow for water drainage, and reduce heat island effect, addressing maintenance issues as well as climate adaptation and mitigation

• Harness digital and virtual infrastructure for vehicle and pedestrian safety, traffic management, and transportation logistics optimization for supply chain improvements
